## EDUCATION

**University of Michigan** **Ann Arbor, MI, USA**
*Masters in Computer Science and Engineering* *Expected May 2028*
Coursework: Human-AI Interaction, Advanced Database Systems, Computer and Network Security.

**The Northcap University** **Gurugram, India**
*B. Tech Computer Science and Engineering (AI/ML)* *October 2021 – December 2025*
GPA: 3.65/4
Coursework: Data Structures, Analysis & Design of Algorithms, Operating Systems, Deep Learning, Computer Vision, Computational Linguistics & NLP, Reinforcement Learning, Applied AI & Expert Systems.

## PROFESSIONAL EXPERIENCE

**Kotronix Technologies** **New Delhi, India**
*Proprietor (Now Advisor, non operational)* *February 2025 – August 2026*
- Led a team of 20 in component-level diagnosis and repair (BMS boards, x86 systems, power modules) of 22+ DC fast chargers for Lucknow City Transport Service Ltd. (LCTSL), restoring 98% of depot chargers to service.
- Delivered $171K in contract revenue for LCTSL while cutting their costs by ~87% versus full-unit replacement.

**ISRO (Indian Space Research Organisation)** **New Delhi, India**
*Project Intern* *June 2024 – December 2024*
- Built an AI-powered disaster monitoring platform that combines real-time news and meteorological data, using NLP to extract location, disaster type, and sentiment; awarded Indian Copyright Office registration for the system.
- Published the research in Springer Nature's Earth Systems and Environment (Q1 journal), doi.org/10.1007/s41748-026-01305-1.
- Improved relevance 5X over plain keyword-based methods using NLP and extractive QA using Python.
- Created a full stack web portal using PostgreSQL database, built a custom API using Javascript and React.js dashboard with advanced filtering for real-time and historical disaster analysis.
- Applied computer vision and large language models for rooftop and sand dune extraction tasks from satellite/aerial imagery.

**CWE (Catalyst for Women Entrepreneurship)** **Bengaluru, India**
*Intern* *May 2024 – June 2024*
- Built a data automation tool to clean and organize the admin client database and marketing email lists, gaining experience in data automation and scripting using Python.
- Reduced manual database cleaning time from 5+ hours to minutes, improving operational efficiency for the admin team.

**Leoforce** **Hyderabad, India**
*Intern* *25 May 2023 – 25 July 2023*
- Built interactive JS-based dashboards and playgrounds with REST APIs, used internally by the Data Science team to test and visualize AI-powered candidate ranking models.
- Developed matching scripts comparing job description skills to candidate profiles for an automated recruitment tool, improving matching speed by 20%.

## PROJECTS EXPERIENCE

*Scholar Stack (Beta Project) (https://scholarstack.in/)*
- Built a platform using React (frontend) and Firebase (backend) for students to share notes and earn community service hours based on quality and effort.
- Automated plagiarism and AI-generated content detection using Python scripts that convert uploaded PDFs to text for analysis.

*Offensive Check Model (https://offensive-check.streamlit.app/)*
- Trained a CNN model in Python on Kaggle's offensive text dataset, augmented with real-world offensive marketing campaign examples, to classify input text as offensive or not offensive with 86% accuracy.
- Deployed the model as an interactive web app using Streamlit, hosted on Streamlit Cloud, gaining experience in deep learning and ML model deployment.

## SKILLS

- *Development:* React.js, Flask, Streamlit, Node.js, Firebase, CSS, PostgreSQL, MySQL, Python, REST APIs, Google Cloud Platform, Android Development, Git, GitHub, GitLab, Kubernetes
- *AI/ML:* Transformer Models, Model Fine-tuning, CNN, Extractive QA, Large Vision Models (LVM), Large Language Models (LLMs), Deep Learning, NLP, Computer Vision, Data Cleaning, Analytics, Visualization
- *Programming:* Python, Java, Kotlin, C, JavaScript, Dart
